DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities: page 9, line
 "fig. 1" should be read "fig. 2". Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Melville (USPN 5,964,273) in view of Asada (USPN 6,232,861).

Regarding to claims 1, 2, 4, 5, 8, Melville discloses an actuator drive (see figs 2 and 7) comprises a movable section (12); a fixed section (18 or 19); an elastic member (14) for connecting the movable section and the fixed section; a magnetic field generation member (magnet circuits, see cols. 3 and 4, lines 60 20); a drive coil (26); a control circuit (205) for applying a drive signal (204) having a rectangular wave to the drive coil, the movable section making a movement relative to the fixed section in a resonant state, the control circuit feeding back an output signal to the drive coil, thereby maintaining the movement of the movable section relative to the fixed section in the resonant state; and a high frequency elimination circuit (low pass filter 201) for eliminating a specific high frequency component of the output signal of the detection

Art Unit: 2836

coil. Melville does disclose a detection coil. Asada discloses an optical scanner with detection coil (12A, 12B, see fig. 32). It would have been obvious to one having skill in the art at the time the invention was made to modify the circuit of Melville with detection coil as taught by Asada in order to detect the position of the movable plate.

Regarding to claim 3, Melville discloses a phase compensation circuit (203) for compensating for the change in phase caused by the high frequency elimination circuit.

Claims 6, 7, 9, 10 repeat the limitations of claims 2, 3, 4 therefore rejected accordingly.

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Danny Nguyen whose telephone number is (703)-305-5988. The examiner can normally be reached on Mon to Fri 8:00 AM to 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Sircus can be reached on (703)-308-3119. The fax phone numbers for the organization where this application or proceeding is assigned are (703)-872-9318 for regular communications and (703)-872-9319 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)-308-0956.
